

A Great Choice of Artificial Safety Surfacing

A Great Choice of Artificial Safety Surfacing

At PlaySmart, we believe safety comes first but we also like to put the fun back into play! Suitable for all weather outdoor sports and play areas or safe indoor play environments, the ActiveSmart range allows customers to mix and match from a range of artificial surfacing materials and impact absorbing substrates to create great systems.

The ActiveSmart Concept

ActiveSmart is a modular surfacing system which allows customers to choose from a variety of needlepunch carpets in a range of colours and artificial grasses in single or two tone in a range of pile heights and combine them with a range of impact absorbing substrates for design freedom across a site or across multiple sites.

SURFACE	Artificial grass	Artificial grass	Needlepunch carpet	Needlepunch carpet
SUBSTRATE	Shock pads	Wet pour surfacing	Shock pads	Wet pour surfacing
BASE	Tarmac or concrete	Various	Tarmac or concrete	Various

Environmentally Smart

All surfacing materials used in the ActiveSmart system are recyclable and shock pads are made from recycled materials and is also high recyclable. ActiveSmart systems are also inert once installed and can be removed and disposed of without harming the environment.

Accident Smart

ActiveSmart's impact performance comes primarily from the substrate with any additional absorption from the surfacing material being over and above the specified Critical Fall Height (CFH). We can design systems to offer CFH protection from 0.8m to over 3m and are happy to configure a system to suit your requirements.

Substrate materials and composite systems are tested in line with BS EN 1177. Recently installed wet pour bays can be used as the substrate provided the CFH is known and is acceptable; however, if the CFH is insufficient, an additional substrate can be used.

ActiveSmart is installed without trip hazards with surfacing materials used being slip and fall resistant to BS 7188.

Installation Smart

Operating in line with BS 1176, PlaySmart's installation teams can install all the combinations of surfacing materials and substrates that we offer. We deliver a consistent high quality of installation time after time, whether this is on straightforward areas, landscaped sites or even embankments.

No heavy ground works are needed to install shock pads but any potholes or local undulation across the area can be eliminated with topsoil or sharp sand. We are so confident of our installation methods that we provide a 5 year installation guarantee.

Artificial Grass range

Smartgrass 24

Smartgrass 30/40

Smartgrass 30/40 Beige

Smartgrass 30/40 Plus

Please note: only our most popular lines are shown here but other products can be provided on request

Maintenance Smart

ActiveSmart is a durable product which requires a low level of aftercare. The aftercare requirements for the specific system you have chosen will be dictated by the surfacing materials used and full instructions for maintenance and repair will be provided for the surface(s) used on your project.

Access Smart

ActiveSmart can be fitted without the need for raised surfaces, so when moving from external areas onto the safety surface, there will be no noticeable change in height levels. Where raised surfaces are specified e.g. installing over an existing tarmac area, ramped edges will always be installed. Also, ActiveSmart is installed so that there will be no misalignment between surfacing materials and no trip edges thereby giving easy access to both wheelchair and pushchair users. Being slip and fall resistant is also a bonus when it comes to users with wheels!

Velour Play Carpet range

Value Smart

Being able to configure systems to suit your exact needs puts you in control of how you allocate your budget. As the substrates required do not use costly groundworks, you'll get great value whichever route you go down and the durability and low maintenance requirements associated with the system will keep your ongoing costs down too.

On large projects, this value offered by ActiveSmart will leave a lot of the overall budget for other elements and, where a large development would be prohibitively expensive, you should still be able to afford to reinvigorate your areas by revamping the surfacing alone.

A Surface with a Smile

By specifying ActiveSmart, you'll be choosing an artificial surfacing system that is safe to use and good to look at. As it offers great value for money too, it's also an affordable solution to suit all budgets. Bring on the fun!

Landscaping

The surfacing materials used for ActiveSmart can also be installed without substrate materials as an attractive landscaping solution for areas such as mounds. However, this should not be considered for areas where fall height protection is required.

Product Details:

Features

- Choose from a variety of surfacing materials and impact absorbing substrates
- 14 colours of needlepunch velour play carpet available
- Green and green/beige artificial grass in a range of thicknesses
- Choice of substrates – shock pads or existing wet pour
- Safety comes first - all systems offer specifiable CFH protection
- Full service provided – design, project management, installation and aftercare

Benefits

- Innovative configurable system – design it your way
- Can be installed over tarmac, concrete, grass or wet pour
- Select a common look over different areas or go for variety!
- Use for new sites or breathe new life in to existing areas
- Integrated solution match by full service – PlaySmart handle it all
- Surfacing materials can also be used for landscaping
